EDUCATION

University of Notre Dame | Notre Dame, IN — May 2027
Bachelor of Science | Major: Computer Science | Minor: Engineering Corporate Practice — GPA: 3.7

EXPERIENCE

Publicis Sapient | Chicago, IL — June - August 2026
Software Engineer Intern

- Built the Python and Java backend and relational data layer for a natural language AI chatbot agent that let marketing operations teams create, schedule, and edit ad campaigns, replacing a manual workflow.
- Selected as the sole engineer trusted with Azure access on a 5-person team; architected and deployed across 7 Azure services, including App Services, Static Web Apps, and a secured virtual network.
- Partnered with engineers and product managers across Agile sprints and client requirement sessions, carrying a client project from problem definition to a delivered product in 4 weeks.

PGA TOUR | Global Headquarters, Ponte Vedra, FL — June - July 2025
Data Science & Technology Support Intern

- Built AI agents in Python that translated natural-language questions into SQL, queried databases, and returned written analyses, providing self-serve access to data that previously required manual querying.
- Containerized the agents with Docker Compose for local development and deployed them to AWS for production, supporting daily use across 5 departments.
- Completed a cross-departmental capstone project with 3 other interns to pitch an activation concept for a new sponsor to senior PGA TOUR leadership, placing second among all intern teams.

ENGINEERING PROJECTS & EXPERIENCE

Web Development | London, U.K. — January - May 2026

- Engineered a RESTful API using Node.js and Express, integrating a MongoDB Atlas database for scalable data persistence while securing endpoints with JWT authentication and Joi-driven validation.

Data Science | London, U.K. — January - May 2026
Excellence in Predictive Modeling Award – 2nd Place, London Centre for Artificial Intelligence

- Engineered a staged dropout-prediction system using Random Forest classifiers trained on scaled, time-sensitive engagement data (grades, forum activity, office hours) to flag at-risk students at four checkpoints across a semester, achieving 84% test accuracy by tuning class weighting and decision thresholds per stage.

Programming Paradigms | South Bend, IN — August - December 2025

- Built a full-stack JavaFX CRUD application enabling anonymous course reviews, with secure authentication, dynamic search, SQLite-backed persistence, and comprehensive JUnit testing.

Adv. Integrated Engineering & Business Topics | South Bend, IN — January - May 2025

- Created a 27-page strategy report on Lockheed Martin with a 6-person team, evaluating the company's industry position, business model, and competitive strategy.

MEMBERSHIP AND ACTIVITIES

Club Golf | University of Notre Dame — August 2023 - Present
Member

CS For Good | University of Notre Dame — November 2023 - Present
